## 6 Static Files

In order to reduce the data sent via RDI and the size of the files on the CRE and the Xetra website Xetra.com, reference data that rarely change like order profiles or trading schedules will only be provided via static csv-files on the CRE, Cash Market Member Section and the Xetra website xetra.com. Members must process all static files. Major changes of the static files will be communicated in advance with sufficient lead-time. Static files need to be processed in order to interpret instrument reference data correctly.

The files contain order profiles (e.g. Limit Order allowed) and trading schedules assigned to each instrument traded on the T7 platform as well as files for the descriptions of the Market Segment Supplements an instrument is assigned.

Static files for the trading venue Xetra and the trading venue Börse Frankfurt will each be available on the Xetra and Cash Market Website under the following path (production files only):

*Xetra.com or Deutsche-boerse-cash-market.com / Instruments /  
All tradable instruments*

Each static file will be available as one version for trading venue Xetra and one version for trading venue Börse Frankfurt.

The name of the zip-file will follow the pattern:

- XETR: T7 (XETR) Static Instrument Reference Data <BusinessDay>.
- XFRA: T7 (XFRA) Static Instrument Reference Data <BusinessDay>.

With:

BusinessDay: format 'DD.MM.YYYY'

Furthermore, the static file will be available on the Common Report Engine as a zip file. The file name will follow the pattern

<MIC\_EnvironmentNr>\_<Name>\_<ReportID>\_<MemberID>\_<BusinessDay>\_<MIC>.zip

With:

MIC\_Environment number, 51 for production and 52 for simulation (XETR), 61 for production and 62 for simulation (XFRA),

Name: always FIL

ReportID: always RDF02

MemberID: always PUBLI

BusinessDay: format 'YYYYMMDD'

MIC: MIC Code of the market, XETR or XFRA

Example:

51FILRDF02PUBLI20210715XETR.zip

61FILRDF02PUBLI20210715XFRA.zip

## 6.1 Formatting of the files

Each csv-file will follow basic format rules. Every data record will be in one line; fields separated by a delimiter – “;”.

1. If a field is empty because it is optional and has no value, only the delimiter will be written into the csv-file.
2. The first row in the csv-file contains the column headers.

The file names will follow the pattern <YYYYMMDD>\_<name>.csv.

## 6.2 Order Profile

Trading venue Xetra and trading venue Börse Frankfurt each categorizes orders according to Order Profiles. The exchange defines these order profiles and enables or disables them for individual products.

An additional table is provided, that gives the assignment of order profiles, per product and instrument type (Order Profile Assignment Table).

The file name will have the pattern <YYYYMMDD>\_orderProfiles.csv.

Example:

20210315\_orderProfiles.csv

For additional information, please see the Order Profiles chapter of the Functional Reference document.

The order profile table includes the following attributes:
