

**Enclosure 2)**

Technical Member Training Xetra® (Release 3.1)

**Speakers:**

Each workshop will be given by a member of our Customer Service team.

**Workshop Structure:**

The course is composed of lectures and on-line presentations. The participants will be provided with training documents. Member-specific configurations and 'sizing' are not part of the technical training. The training is based on the „train-the-trainer“ principle.

**Member Groups and Workshop Requirements:**

The workshop is geared towards employees of exchange members from the system administration sector who will start system administration for Xetra® and for members who already are accustomed with Xetra® system administration. Instead of designating their own employees, exchange members can also designate employees of appointed service providers.

Participants should have basic knowledge of those MISS platforms utilized at the exchange member's premises. Participants should also possess know-how in setting up and managing networks. Since training will be carried out on WindowsNT. Because the training is based on the train-the-trainer principle, the number of participants is limited to 1 person per institute.

**Objective of the Workshop:**

In the course of this update seminar participants will be presented with all changes of Xetra® 3.1. as opposed to the Release 3.0. You will get an overview at the new architecture, new terminologies and new operational developments. Moreover, the new Installation Kit will be presented online. Participants will be able to install the new release without having to contact the X/E helpdesk..

**Date / Workshop Number / Language:**

Date	Workshop Number	Language	Location
