## 1 Introduction

The Eurex Clearing FIXML Interface provides Eurex members with a highly flexible, standards-compliant and cost-effective way to enter, access and modify their clearing data. Based upon and compliant to the widely used FIX (Financial Information eXchange) standard, the interface allows members to choose and deploy their own operating systems and access interfaces. The transport layer is AMQP (Advanced Message Queuing Protocol), the syntax is FIXML.

### 1.1 Intended audience

This document is intended for system designers and programmers who wish to develop/adapt their client application to interact with the services offered by the Eurex Clearing FIXML Interface. It assumes that readers have a basic understanding of FIXML.

### 1.2 Eurex Clearing FIXML Interface documentation

The Eurex Clearing FIXML Interface documentation is organized as follows:

- Volume 1: Overview
- Volume 3: Transaction & Position Confirmation
- Volume 4: Transaction & Position Maintenance
- Volume 5: Public Broadcasts
- **Volume 6: Message Samples** (this document)

All documents are available for download on the Eurex Clearing website [www.eurex.com/ec-en/](http://www.eurex.com/ec-en/) under the following path:

Support > Initiatives & Releases > C7 Releases > related release > System documentation > Interfaces

### 1.3 Eurex Clearing Messaging Interfaces – Connectivity documentation

The Eurex Clearing FIXML Interface, Eurex Clearing FpML Interface and Margin Calculator share common connectivity documents for AMQP and WebSphere MQ:

- A: Overview
- B: AMQP Programming Guide
- E: AMQP Setup and Internals

All “Eurex Clearing Messaging Interfaces – Connectivity” documents are available for download on the Eurex Clearing website [www.eurex.com/ec-en/](http://www.eurex.com/ec-en/) under the following path:

Support > Technology > C7 > Messaging Interfaces Connectivity

### 1.4 Conventions used in this document

**Cross references** to other chapters within this document are always clickable, but not marked separately.

**Hyperlinks to websites** are underlined.

Changes applied to this document after the last version has been published (other than grammar/spelling corrections) are marked with a change bar in the left margin as demonstrated in this paragraph. Old change bars will be removed from version to version.

## 1.5 FIX version

The Eurex Clearing FIXML Interface follows **FIX Version 5.0 SP2** with Extension Packs. In a few instances, additional valid values have been specified. To learn more about the standard, visit the FIX Protocol's website at:

<https://www.fixtrading.org/standards/fix-5-0-sp-2/>

The latest FIX version with extensions is available at <https://fixtrading.org/packages/latest-fiximate>.

## 2 General remarks

### 2.1 Sample data

All message samples below have been generated using a production-like test environment. Certain functional/business limitations (such as availability of products for multilateral off-book trading) do, however, not apply to this particular test system. Consequently, contract availability, sizes, prices, expiration dates etc. in the messages contained herein are solely for illustrative purposes.

### 2.2 Sample Members

The sample member setup is as follows:

Member ID – ECAG	Member ID - ECC	Type
ABCFR	ABCEX	General Clearing Member
XYZFR	XYZEX	Non-Clearing Member
GCMFR	GCMEX	General Clearing Member
NCMFR	NCMEX	Non-Clearing Member
RCFRA	RCFEX	Registered Customer

### 2.3 Clearing house distinction

Example messages of clearing house ECAG and ECC are similar as long the functionality is existing for both clearing houses. As part of the header the SenderCompID (SID Fix-Tag 49) on the outbound messages and the TargetCompID (TID Fix-Tag 56) on the inbound messages will describe the clearing house. All other fields will be functional identical filled.

ECAG	ECC
SID="ECAG"	SID="ECC"
TID="ECAG"	TID="ECC"

### 2.4 Formatting

The formatting of the sample message is for display purposes only. Actual FIXML messages are formatted as a single line and do not contain any line breaks. Request messages formatted on more than one line will be rejected by the system.

### 2.5 Order of fields

The order of fields in a message may not necessarily correspond 1:1 to the order printed in volumes 3-5. The structural order of groups is fixed, the order of fields within these groups is flexible.

### 3 Transaction confirmation

## 7 Value Based Average Pricing

Messages in this chapter are based on one functional scenario and hence exemplify the workflow of a group throughout a business day. For a better understanding it is recommended to consider the sequence of this chapter because it follows the chronological order of the messages. Only exception is the cancellation of the allocation (7.5) which is –in our scenario– processed before the closing of the group during end-of-day processing (7.4.4).

### 7.1 Grouping – Assignment of transactions to a group

### 7.1.98.1.9 Broadcast messages pursuant take-up approval

Upon take-up approval the allocation process is finished and the transaction gets re-booked. In order to complete the workflow, all involved sides receive a final workflow broadcast (*AllocStatus*=9, "Claimed"). At the same time the exchange members receive a *TradeCaptureReport* message via transaction confirmation broadcast: NCMFR receives a reversal in order to reverse the given-up transaction and XYZFR receives a message booking the transaction.
